

Clarke DC, Skiba PF. Rationale and resources for teaching the mathematical modeling of athletic training and performance. *Adv Physiol Educ* 37: 134–152, 2013; doi:10.1152/advan.00078.2011.

In the *CP model* section, *Equation derivation and assumptions*, lines 5–7, the sentence should read as follows: “The model features two parameters, CP and W' , which are related according to the following equation...”

The labels in Fig. 5 are shown corrected below.

In *Conceptual benefits and practical applications*, paragraph 4, lines 7–8, the authors should read as **Jimenez** and Skiba. The author listed in Ref. 52 should be **Jimenez**.

In Fig. 10B the equation for $k_2(s)$ should include $w(j)$, as follows:

$$k_2(s) = k_3 \sum_{j=1}^s w(j) e^{-(s-j)/\tau_3}$$

A

$$p(t) = p(0) + k_1 \sum_{s=0}^{t-1} e^{-(t-s)/\tau_1} \omega_p(s) - k_2 \sum_{s=0}^{t-1} e^{-(t-s)/\tau_2} \omega_n(s)$$

Hill equation: $\omega(s) = \kappa_{p/n} \frac{w(s)^\gamma}{\delta^\gamma + w(s)^\gamma}$

**B**

$$p(t) = p(0) + k_1 \sum_{s=0}^{t-1} e^{-(t-s)/\tau_1} w(s) - k_2(s) \sum_{s=0}^{t-1} e^{-(t-s)/\tau_2} w(s)$$

$$k_2(s) = k_3 \sum_{j=1}^s w(j) e^{-(s-j)/\tau_3}$$
